Gritty OS Recruit Hub: Student View

Development Sprint Spec Outline: Student View Remediations

Sprint 007

Apr 26, 2026

This page contains a set of suggested remediations for the Student View in the Gritty OS Recruit Hub Rebuild project to be completed in a Sprint Session on the date listed above. These remediations are designed to be completed in a single Claude Code session in sprint mode. I am utilizing the Claude Chrome Extension to help provide active context in this view.

Mode: sprint-mode with /coach-me skill invoked for the entirety of the session

Scope of Remediations for Sprint 007

This sprint session will be considered Sprint 007. Below is the outline of necessary remediations for this development sprint.

Key Documentation

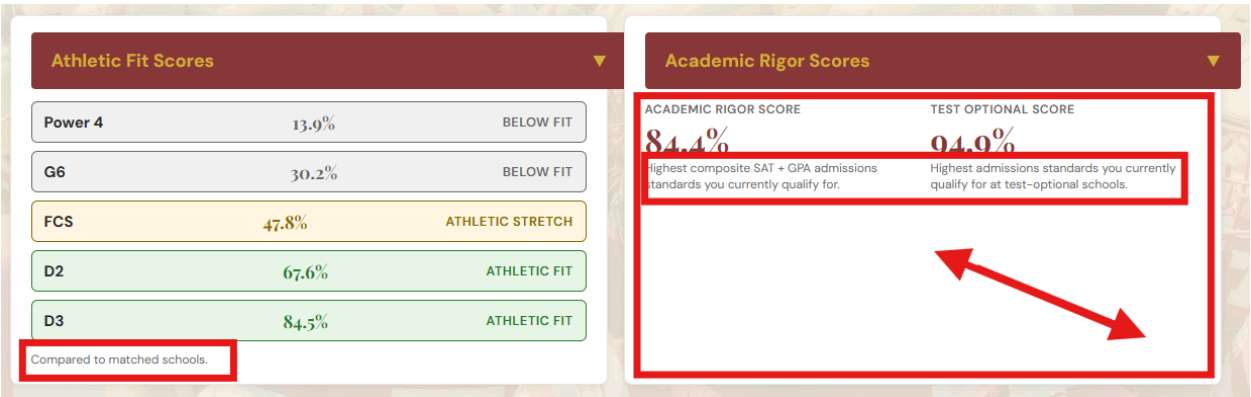
File Description	File Location	Notes
Sprint 007 Session Spec (built by Claude.ai from this Sprint 007 Outline	"C:\Users\chris\dev\gritty-recruit-hub-rebuild\docs\specs\sprint-007-session-spec.md"	
Plug-ins, skills, and native Claude skills to be deployed as necessary	superpowers	
	Parallel agents	
	sequential-thinking	
	front-end-design	
	planning	
	testing	
	verification	
	review	
Permissions to be auto-approved	File reads (Read, Glob, Grep), web lookups (WebSearch, WebFetch, Context7), git inspection (status, log, diff, branch list), system checks (versions, env vars, directory listings).	
	Skills that produce analysis, recommendations, or guidance without modifying system state. Examples: brainstorming, systematic-debugging, explain-code, coach-me, obsidian-markdown. Agent invokes without asking or notifying. (See Part 7, Skill Invocation Autonomy Policy for full S1 classification.)	
	Any “safe” git permissions	
CLI to be used	Vercel, supabase	
MCP to be used as necessary	Supabase, Context7, Claude Preview, Claude in Chrome, Scheduled Tasks, MCP Registry	

Key Factors to Remember in Edits

1. No new tables or data should be needed to execute these edits.
2. All edits made for desktop views of the web app should be paired with the necessary edits for mobile-responsive formatting, including our margin presets.

Student View

MY GRIT FIT



1. **Athletic Fit Scores Explain Blurb -** Change from "Compared to matched schools." to

   "Your percent rank compared to the distribution of Height, Weight, and Speed of all players in each level of college football. A score of 50% means means your athletic metrics equate to the average athletic metrics for that level of play."

2. **Academic Rigor Scores Explainer Blurb Remediation**

   a. **Academic Rigor Score -** Change from "Highest composite SAT + GPA admissions standards you currently qualify for." to

      "Your current GPA and P/SAT scores qualify you for schools that are <u>NOT</u> test optional and are equal to or below this percent rank of Academic Rigor."

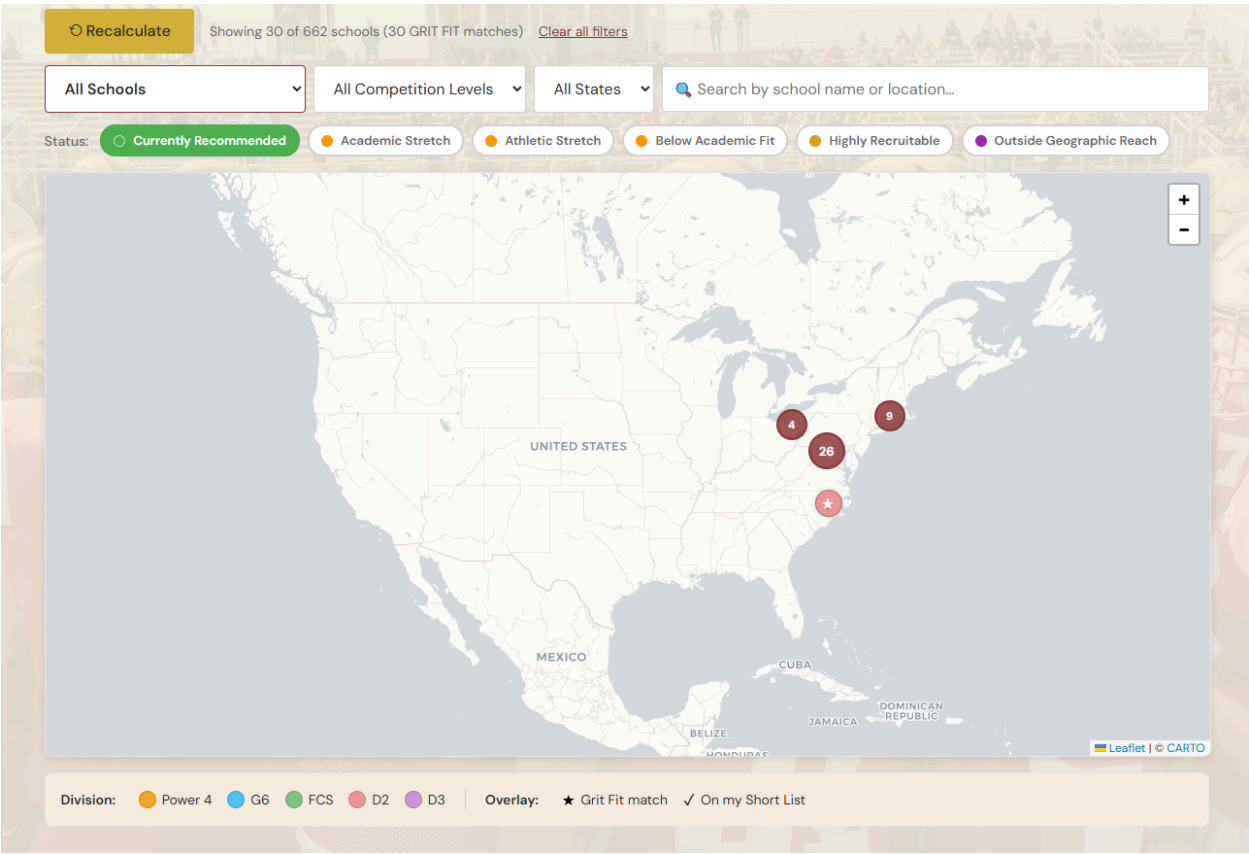
   b. **Test Optional Score -** Change from "Highest admissions standards you currently qualify for at test-optional schools" to

"Your current GPA qualifies you for admission to schools that <u>ARE</u> test optional and are equal to or below this percent rank of Academic Rigor."

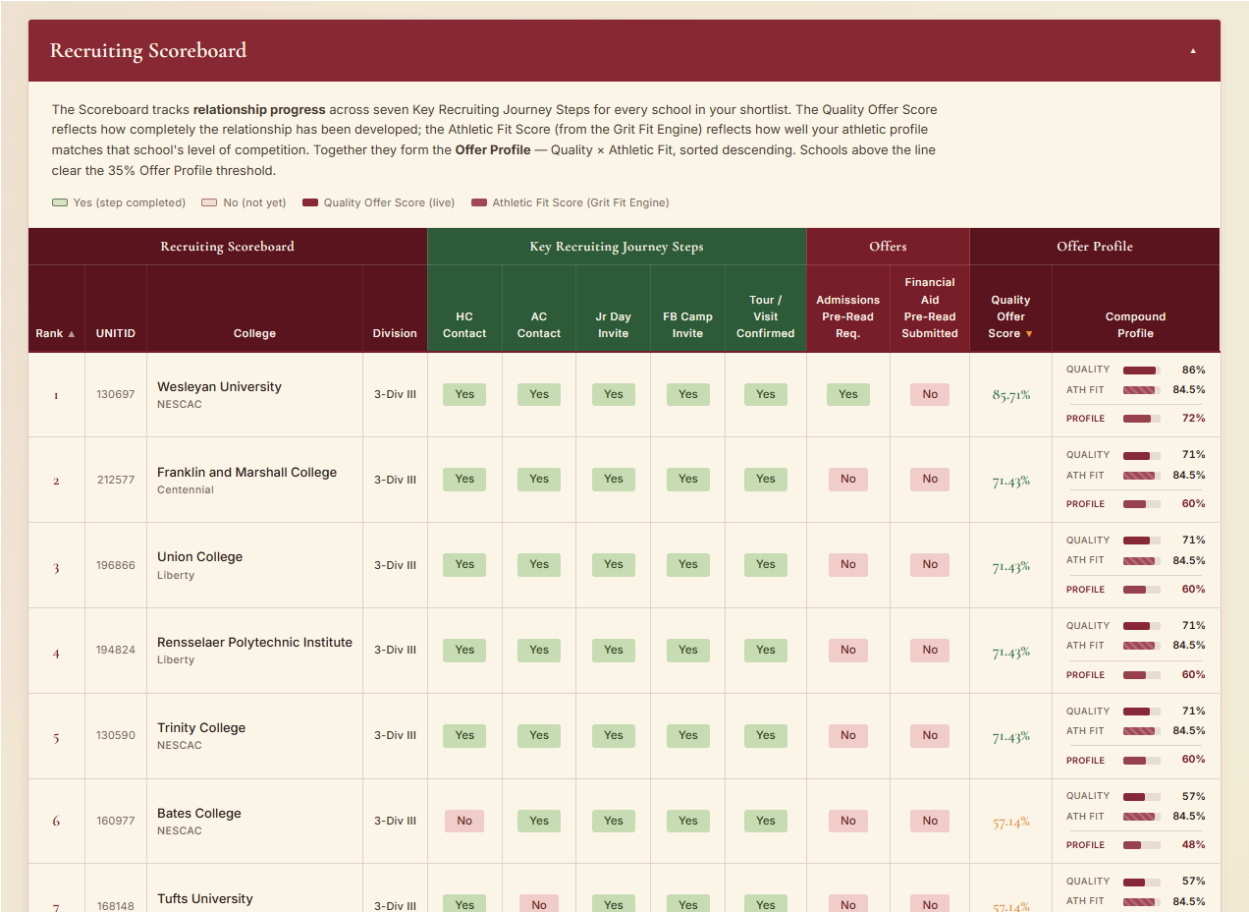
3. **Academic Rigor Percentages UI Adjustment -** Academic Rigor Percentages' Font should take up a larger portion of the white space in that collapsible modal.

4. **My Grit Fit Map View Category Fit Selection Default State -** Start with My Grit Fit Map View with only the "Currently Recommended" schools selected. Make no other changes to the selectable filters. They work perfectly otherwise. Just change the default state.

Desired End State



YOUR SHORTLIST



Recruiting Scoreboard

The Scoreboard tracks **relationship progress** across seven Key Recruiting Journey Steps for every school in your shortlist. The Quality Offer Score reflects how completely the relationship has been developed; the Athletic Fit Score (from the Grit Fit Engine) reflects how well your athletic profile matches that school's level of competition. Together they form the **Offer Profile** — Quality × Athletic Fit, sorted descending. Schools above the line clear the 35% Offer Profile threshold.

Yes (step completed) · No (not yet) · Quality Offer Score (live) · Athletic Fit Score (Grit Fit Engine)

Recruiting Scoreboard				Key Recruiting Journey Steps					Offers		Offer Profile	
Rank	UNITID	College	Division	HC Contact	AC Contact	Jr Day Invite	FB Camp Invite	Tour / Visit Confirmed	Admissions Pre-Read Req.	Financial Aid Pre-Read Submitted	Quality Offer Score	Compound Profile
1	130697	Wesleyan University NESCAC	3-Div III	Yes	Yes	Yes	Yes	Yes	Yes	No	85.71%	QUALITY 86% ATH FIT 84.5% PROFILE 72%
2	212577	Franklin and Marshall College Centennial	3-Div III	Yes	Yes	Yes	Yes	Yes	No	No	71.43%	QUALITY 71% ATH FIT 84.5% PROFILE 60%
3	196866	Union College Liberty	3-Div III	Yes	Yes	Yes	Yes	Yes	No	No	71.43%	QUALITY 71% ATH FIT 84.5% PROFILE 60%
4	194824	Rensselaer Polytechnic Institute Liberty	3-Div III	Yes	Yes	Yes	Yes	Yes	No	No	71.43%	QUALITY 71% ATH FIT 84.5% PROFILE 60%
5	130590	Trinity College NESCAC	3-Div III	Yes	Yes	Yes	Yes	Yes	No	No	71.43%	QUALITY 71% ATH FIT 84.5% PROFILE 60%
6	160977	Bates College NESCAC	3-Div III	No	Yes	Yes	Yes	Yes	No	No	57.14%	QUALITY 57% ATH FIT 84.5% PROFILE 48%
7	168148	Tufts University	3-Div III	Yes	No	Yes	Yes	Yes	No	No	57.14%	QUALITY 57% ATH FIT 84.5%

1. **Add Recruiting Scoreboard to Student Shortlist View:** See the following documentation to complete this task within "C:\Users\chris\dev\gritty-recruit-hub-rebuild\prototypes\recruiting-scoreboard":

```
gritty-recruit-hub-rebuild/
└── prototypes/
    └── recruiting-scoreboard/
        ├── README.md
        ├── DESIGN_NOTES.md
        ├── SPEC_FOR_CODE.md
        └── recruiting-scoreboard.html
```

Recruiting Scorecard is the New Feature. The Recruiting Scoreboard is a read-only progress lens that mounts as a collapsible panel above the Pre-Read Docs Library on each student's

existing Shortlist page in the GrittyOS Recruit Hub. It contains only schools currently in the student's shortlist, rendering one row per school across three column groups — identity (Rank, UNITID, College, Division), seven Key Recruiting Journey Steps tracked as Yes/No booleans pulled live from the Supabase 15-step Recruiting Journey schema, and two Offer-related booleans (Admissions Pre-Read Requested, Financial Aid Pre-Read Submitted) — which together drive a Quality Offer Score computed as count of Yes ÷ 7 × 100%. That score multiplies against the student's Athletic Fit Score from the existing Grit Fit Scoring Engine (mapped to each school's level of competition: Power 4, G6, FCS, D2, or D3) to produce an Offer Profile per school, rendered as a stacked-bar compound visualization and used to sort the table descending with a 35% threshold boundary marker separating active prospects from lower-priority outreach. The booleans are display-only — they update only when the student marks a step complete on the school card itself downstream in the existing Shortlist UI, preserving a single source of truth and a single editing surface. The panel uses the existing Recruit Hub burgundy/parchment palette with Cormorant Garamond display typography to belong visually to the Shortlist page, deviating only on the boolean Yes/No cells (tuned green/red for semantic clarity) and a single dark-green band on the Journey Steps group header to preserve the data hierarchy. The Scoreboard is strictly additive: the Pre-Read Docs Library, filter bar, sort dropdown, school cards, and status pills all stay byte-identical, and the build sprint must not refactor any existing component. It is a template for use with all GrittyOS Recruit Hub students, not a per-student artifact — Ayden Watkins's data populates the prototype as a worked example, but the production component renders any student's Scoreboard from their own shortlist and Grit Fit Score data.

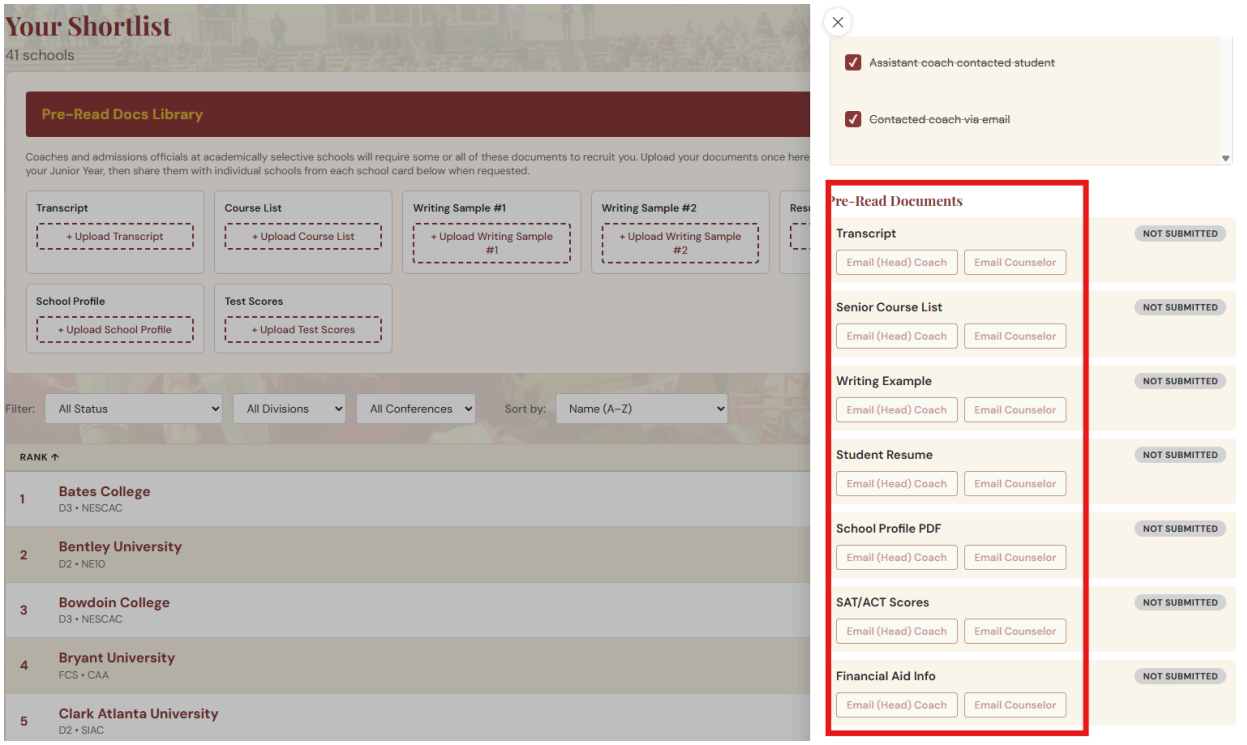
README is the orientation document Scout reads at session open. Sprint status, file index, what's resolved, what's blocking, in/out of scope, the template note that Ayden's data is illustrative for a Recruit Hub-wide feature.

DESIGN_NOTES is the rationale document. Twenty-four decisions organized by round — six from initial scoping, seven from the clarifications you sent in your last two messages, four from downstream construction, plus deferred items. Every "why did we do it this way" question has an answer here. The most important entry is D2.1 — the multiplicative formula rationale — because that's the one most likely to come up during the build when someone asks why we're not just averaging.

SPEC_FOR_CODE is the build contract. Five-step gated sequence: Supabase sanity check (Patch leads, blocks UI), component implementation (Scribe), page integration, formulas with edge cases, acceptance criteria. The seven-row Supabase mapping table at the top is the critical artifact — the column names are placeholders matching the prototype labels, but the table is the deliverable from Step 1. If those names don't match the schema, Patch corrects them before any UI work begins.

2. **Student View Shortlist Slide-Out View: Link Student’s Coach’s Email and Guidance Counselor Email so they can update coaches and request documentation from counselors -** Currently, students are not able to email their coach and counselors from their individual schools on their Shortlist through the slideout cards. They need to be

able to update their assigned head coach and their assigned guidance counselor regarding (Coach) their Recruiting Journey with the school or (Guidance Counselor) regarding their Pre-Read Documents. This needs to be remediated for the MVP to be live.



3. **Student View Shortlist Slide-Out View Mobile UI: Slideout Animation Necessary for User Clarity -** Stabilize the screen parallax WITHIN the Shortlist Slideout card for each school so that users can only tap and drag vertically in mobile view. Right now, in the mobile UI in the Student Shortlist Slide-Out Card, users are able to accidentally drag the screen horizontally, which creates a very wobbly feel to the app experience as users navigate through.

BOTH GRIT FIT AND SHORTLIST

1. **Category Fit Language Change -** In both areas where Category Fit shows up for students in their view (My Grit Fit and My Shortlist), change the language of the Category Fit description of the green badge from “Currently Recommended” to “Grit Fit School”. This aligns better with our model and is clearer for student/parent comprehension and navigation.
